

Elizabeth Gallagher

I am opposed to YGI receiving approval for an air quality permit, along with all construction associated with this project. I have seen that the projections for emissions are more than the cities of Las Cruces and Albuquerque combined. This is absurd. Climate change and climate catastrophes are one of the biggest worries that I have. I want the children in my life, that live in this state, to have a future where they can breathe clean air, drink clean water, and know that the adults before them made decisions to protect them. We are in historic drought conditions, the Rio Grande is dry, and it is absurd to consider building a data center that uses so much water in New Mexico. We need the water for people, animals, plants, and life in general in the desert - not fueling a data center! I do not want to see our aquifer being depleted even more than it already has been. Please, do not approve this air quality permit or any subsequent work on this project.
