

Victoria Musa

Please, for once, just think about more than what is going to go into your bank account. 10 million tons of carbon dioxide annually for a data center? You know it's common for carbon dioxide to stay in our atmosphere for 20 to 200 years. You know how much heat 10 million tons of carbon dioxide annually will produce on our planet, which is still trying to heal from the effects of the global warming surge back in the 2000s. You know how many waterways and rivers will dry out because of that heat. You know that New Mexico has the lowest water-to-land ratio in all the states and is already threatened by contaminants, both artificial and natural. You know that over 6 million people in Mexico and Texas live off of waterways like the Rio Grande. You know, there will be children forced somehow to learn while a data center emits noise pollution so loud that the schools that are almost 5 miles away would still be able to hear it. You know how many native animals and plants will have to suffer as if the planet weren't their home too.

You know all of this and still fight to make building a data center the right thing? What is the point of it when people get sick, injured, or even worse, die? Don't you already see the destruction and hurt data centers are causing, and your response as someone who is promising to "invest in the environment" is to make the largest one of these centers. This planet, this floating rock, is all we have. I wouldn't be thinking of AI tools if I were fighting heat stroke, dying from dehydration because there was no water, or hearing about the next species that has gone extinct because it had lost its natural habitat. This all may seem like over exaggeration to you, but it's a life sentence to others. Just take a real look at who you are trusting. Bloom Energy was fined for improper hazardous waste handling in Pennsylvania and Maryland, and yet we are trusting them to build an "environmentally friendly" data center. Doesn't that just sound ridiculous?

This isn't to shame anyone but to truly open your eyes. This is real and going to happen if we don't do something about it. We can no longer just sit and wait because this will affect our planet in a way we can never fully turn back when it is done. I'm sick and tired of hearing people point out these important issues as if they are something that is too late to fix, as if we are a lost cause, as if this one earth isn't our home, basically putting a finish line in the middle of the race. So I beg of you, fight, write more comments and posts, oppose the spread of misinformation, protest, learn and share, do whatever you may to make them wake up and understand this is our chance, that we are real voices, and we will not finish here.
