I am deeply concerned with the affects on the climate project Jupiter is going to have. It's estimated that it will fill the air with 10 million tons of climate warming gasses a year. This not only disregards New Mexico's previously established climate goals but it's a higher amount of pollution than the states three largest cities combined. On top of that ai data centers have been proven around the country to affect the local water supplies. Given the struggle of all south western states to have adequate amounts of water this could have serious impacts on everyone living in the state. Finally various schools and daycares are close enough to the proposed location for the data center that they would be affected by the pollutants being poored into the air. This is an injustice to these children and could cause serious health affects. It also raises social concerns as these schools and daycares host primarily Hispanic children with 96% of the children at the nearby high school being Hispanic. This alone should be enough to get project Jupiter cancelled immediately.

"The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually."
