I am submitting this comment to urge the New Mexico Environment Department to REJECT Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid in Doña Ana County. The project's proposed fuel cell powered grid is concerning for many reasons: It will produce a high level of greenhouse gas and toxic pollutants. This technology generates toxic waste, and the process for handling this waste is still unclear. Fuel cell technology or a centralized waste system has never occurred at this scale. Surrounding communities' air will be negatively impacted by this development, alongside toxic waste possibly being improperly handled. Not only will this project severely affect the environment and citizens of New Mexico, it will also affect the entire planet. It is important that we prioritize the environment and the wellbeing of citizens.
