

Jordan Gilliland

This is not ok to do we are spending so much money on a project that will just destroy and damage our earth even more. Global warming is not just something we can ignore and people may be trying but it's happening right in front of our eyes. The damage and harsh effects AI has caused to our world and animals is immense. Habitats destroyed, water supply diminished and people just sit back and decide that AI images is better than the lives of animals. This data center won't just affect animals but also the people in New Mexico. There is already low safe water supply in most parts of New Mexico and this data center will leave them with nothing eventually. This will have the poor side of New Mexico left fending for water and having to scrape up last bits of money to buy clean drinking water that's been shipped because of the low supply. This is not okay, this proposed data center would bring us one step closer to our earth dying. Think about our earth, the people, the animals. We need money to go to the struggling people in America not to AI.
