

Jessica Aguirre

I urge the New Mexico Environment to reject the Yucca Growth Infrastructure, LLC-YGI Microgrid Air Quality Construction Permit Application. The short term economical benefit to a very small minority, is not worth the potentially devastating environmental and health impacts Project Jupiter will have on the community. Data centers cause electricity costs to rise and residents will be the ones footing the bill. Water is already a scarce resource in the desert, and it does not need to be further depleted for the economical gain of a tech company. Data centers in other cities have provided little to no benefits in the way of minimal employment opportunities, and hardly any tax revenue, not to mention the pollution! Please put your community first, and reject this permit.
