

Joselyne Ruiz

I want to live in a future where I'm not worried about the air quality my future kids will be living in or if will have clean water to shower in. I want to live in a state where we have clean free water accessible and our animals and rivers are being protected. We all know it takes an immense amount of water to generate those centers and as a local we are struggling as it is already. I don't want our beautiful Rio Grand to be something from the past I want it to continue living and for my kids to grow up fishing in it. It killing our environment and it's killing us.
