

Gabe Karns

NO to Project Jupiter... The name is fitting. Just like the gas giant, it's obvious what this project is really after: sucking up our gas and non-renewable resources. Our home isn't just an extraction zone to be drained.

What's really worrisome is the water. We all know how incredibly scarce our water is, and with predictions saying our supply could run dry by 2030, every drop counts. Handing over our most vital resource to a massive, unsustainable project is completely reckless.

On top of the water crisis, Project Jupiter brings real, unacceptable health risks to our communities and our neighbors. Nobody here asked for this. It's unsustainable, it's unsafe, and it is absolutely not "New Mexico True."

No water, no life. Please do the right thing and reject this project.
