

Carly Johnston

This permit should be denied for a multitude of reasons. Number one, the county has disregarded the outcry of the community in protest of this project. Two, this will significantly contribute to pollution and global warming in an environment that already suffers from poor air quality and diminishing resources. Three, the land and air is Native property and those relevant communities have not been consulted as sovereign nations. Four, the cell technology is not tested enough to be less detrimental than the original proposition. Five, the company and industry have proven to not be trustworthy and have made a point to create false advertising to lure in support. We the community see through it and adamantly oppose Project Jupiter and any other data or AI centers.
