I don't have much say in this but I believe that humanity as a whole comes first. A data center that uses more water than anything else in this planet and creates more pollution from one source ever seen shouldn't be just something we create. Our inability to see the wrong in this is the exact thing that threatens to collapse us. I believe that we shouldn't allow this to just be created. Including 60 days for review is fair, it shouldn't be a "choice" it is our right to participate and we should be allowed to all vote regardless. Our air quality should come first, after all it is the thing that keeps us alive which is why their permit should be denied as it is plaguing our air and destroying us from within and if it is not denied a public hearing is demanded. Due to this, approval of said permit is considered government-sponsored environmental racism. This is due to residents at Dona ana County have been constantly impacted by pollution leading to the air quality being less than what is needed for federal government rules. I conclude this statement with hopes that whoever reads this may find the goodness in their heart to care for our planet. After all this is the only one we have.
