

Ella Lakes

We do not need AI! This campaign— which blatantly uses brow washing to try and gain the respect and support of NM residents— is unnecessary and secretive. Building a massive data center in an area that already struggles to meet air quality standards, refusing to denote who foots the bill for the \$165 million dollars being poured into the build, and trying to cover up the fact that it would release an insurmountable amount of CO2 yearly all screams sketchy and misleading. The individuals who planned this and are attempting to realize it have no care for the residents of NM, nor the rest of the United States because this WILL affect us nation-wide. Our environment is already struggling and we are running out of fresh water to drink. AI does not need water; HUMANS DO.
