

Leigh Saunders

This project should not be permitted for the following reasons: 10M tons of CO2 emissions will adversely impact the public health, particularly in times of atmospheric inversion layers. Also, I find no evidence that this project will comply with the New Mexico Energy Transition Act. Please do not permit this project to proceed without a clear and reasonable plan to comply with NM SB489. Additionally, do the expected emissions include those required for water treatment?

I have emailed Project Jupiter twice with requests for information, and received no reply in either case. I request that NMED pause their consideration of this application until more information is available.
