New Mexico is not the place for Project Jupiter. Even w the amended proposal to have it powered by fuel cells, it would still generate dangerous amounts of hazardous waste, and would still create more greenhouse gas emissions than Albuquerque, Santa Fe, and Las Cruces combined!!!
And what about water usage? The Rio Grande is currently dry in many parts of Albuquerque and most of the state reservoirs are way way below capacity. NM cannot allow the astronomical amounts of water a data center would require to be squandered.
