Data centers are everything except positive. They don't benefit anyone, it negatively affects people and anything surrounding the area. Animal habitats are being destroyed, it is polluting the air and water, wasting tons and tons of water, causing sound pollution. This is nothing but capitalism's and selfishness. People have been speaking up but are being ignored. We cannot live without the planet we live in, so why are people deciding to expand AI while knowing the consequences. Before AI, we did perfectly fine without it but all of a sudden we're not? This needs to stop, we must be heard.
