

Chavonne Harroun

As a longtime resident of New Mexico I feel very strongly that this application should be denied. We need to protect our air quality, precious water, and all of our limited resources in New Mexico. We need to prioritize the use of resources for industries that benefit New Mexico residents in ways that make our future (and our children's future) sustainable. This data center is not a priority and will actively harm our residents by further depleting already limited resources. Data Centers are not needed here and will not benefit the state enough to devote resources to it.
