

Mary Moreck

I live in Santa Teresa and under NO circumstances do I want experimental technology deployed at an unprecedented scale in my backyard.

I urge the NMED to deny the Yucca Growth Infrastructure, LLC-YGI Microgrid Air Quality Construction Permit Application. Granting a permit to emit over 10 million metric tons of CO₂ annually violates NMED's mission to protect public health and prevent air quality deterioration.

YGI must not be allowed to greenwash a fossil-fueled plant that erases New Mexico's climate progress. NMED must reject this permit, or at the very least schedule a formal public hearing to investigate these severe community impacts.
