My name is Anonymous. And although I am not a New Mexico resident, I am writing because I am concerned about the risks and harms Project Jupiter poses to New Mexicans. I am submitting this comment to urge the New Mexico Environment Department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid in Doña Ana County. We all depend on this earth so much and data centers are only going harm it in the long run. I don't know about you, but I want a future, not only for myself but my loved ones and future generations in general. Our planet is already at risk enough with climate change and global warming already showing massive affects, these data centers will further threaten humanity's future. Water shortages are already happening around the world, building centers like this is only going to add to the problem, not reduce it. Our planet's health should 1000% be prioritized over money and technological advancement. The project's proposed fuel cell powered grid is concerning for many reasons: It would still produce a high level of greenhouse gas and toxic pollutants This technology generates toxic waste, and the process for handling this waste is still unclear. Fuel cell technology or a centralized waste system has never occurred at this scale. Surrounding communities' air will be negatively impacted by this development. I urge the NMED to outright reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I ask the department to please hold a bilingual public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology. Sincerely, Anonymous.
