

Addi Kever

This project won't only ruin our futures but also the earth. It will dry up the water that we already are struggling with. We are already struggling with climate change and our o zone layer. This will just speed up the process of all of that. Gen Z is just getting into life but children are still young having even more time ahead of them and their children. Kids are becoming dumber and so stuck to technology as it is. At least some of it is real but before we know it everything is going to be fake. Scams are gonna become more common to fall for. Jobs are gonna be taken over from ai and robots. It's already starting to happen. This is the last thing this world needs. The rich get richer and the poor get poorer.
