

Lilibeth Sanchez

I am writing to VEHEMENTLY OPPOSE this project. It is unbelievable that in the driest part of the country, where water is practically non-existent (have you seen the Rio Grande lately?!?), there is this ridiculous proposal to build a facility that will waste almost 1 MILLION GALLONS of water just to start it up, along with producing more greenhouse gas emissions than Albuquerque and Rio Rancho combined.

Please consider the lives of New Mexicans - there is no way a few hundred "jobs" will make up for the inevitable permanent damage to this beautiful state and future generations if this project moves forward.
