

David Mooney

These permits need to be denied.

If not denied then it is absolutely necessary public hearing on these permits. The amount of CO2 that these untested fuel cells will produce will completely undo all the progress we've made as a state moving towards renewable energy.

Additionally the way they have been canvassing for positive comments by lying to people and submitting comments people did not approve, including City Councilor Fiebelkorn. This is absolutely unacceptable and should be taken into account when weighing the positive comments on these permits.

Do what is best for the State and our Environment. Deny these ridiculous permits outright, or at the very least, hold a public hearing.
