

Irene Dorman

Please reconsider construction of this facility. New Mexico just doesn't have water capacity for this. We need to be thinking of the next 50-100 years and more. People, animals, insects, plants can't survive without water and it's already in such short supply. Why would they want to destroy natural resources and make it so that this place is unlivable for us now and for our kids as they grow into the future? Don't be so shortsighted, stop this facility.
