The people of this communities health and safety should be worth considerably more than the profits of a mega corporation. Project Jupiter's Fuel Cell Air Quality Permit should not be approved. It prioritizes corporate expansion over public health and environmental responsibility. Although the project is promoted as a cleaner alternative to traditional power generation it would still depend on natural gas. Labeling the project "clean" does not eliminate the reality that it would add new emissions to a region already facing many environmental challenges. Approving another fossil fuel facility sends the wrong message at a time when communities are demanding investments in renewable energy rather than infrastructure that extends dependence on natural gas. Residents deserve clean air, greater transparency, and stronger protections than those offered by the current permit. I am asking that you deny Yucca Growth Infrastructure's air quality permit. Not only for the people in this specific community, but for the safety and health of all of us.
