

Brian Wortman

I urge you to deny the permit for Project Jupiter's fossil fuel microgrid.

This project conflicts with our community's health, prosperity, and values. Approving it means accepting continued air pollution that harms residents' health while prioritizing a private energy facility over local economic development that would create sustainable jobs and strengthen our tax base.

Project Jupiter also threatens our water through contamination risks and unsustainable consumption while exporting profits that should remain in New Mexico.

This proposal continues a harmful pattern: extracting our natural resources, degrading our environment, and saddling the costs with residents while benefits flow elsewhere. We deserve solutions that respect our air, water, and future.

No to exporting profits.

No to destroying our environment and natural resources.

No to new gas plants.

No to Project Jupiter.
