I'm a young student, and I've lived long enough to witness the damage our hands have inflicted on our planet: fires, pollution, climate change. I've seen forests become just another site of exploitation and pure overproduction, to the point that they can't be allowed to return to their former glory. I know you know, you just don't want to see it, but the damage we've done, the damage you've done, has taken its toll on many others who are completely innocent. And now, I've heard about this project. In all honesty, I firmly believe that this project will only harm us in the long run rather than advance our society. It will be a source of significant greenhouse gas emissions, pollution, and the exploitation of already scarce resources like water. No one should have to suffer the consequences of something they didn't ask for, much less should someone else's land be used to create places like this. I urge the NMED to outright reject YUCCA Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I ask the department to please hold a bilingual public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology.
