

Jean Kerdock

Deny these permit applications. Project Jupiter would harm Doña Ana and the state of New Mexico. The only ones who'd benefit are the developers and their bank accounts. Project Jupiter, if allowed to proceed, will use a million gallons of water just to get started. It will emit more pollution than NM's three largest cities combined. It will use experimental technology on an unprecedented scale that will create an unknown amount of hazardous waste. The developers cannot be trusted. Please don't allow this to proceed. Please stop it. Please deny their permit applications. New Mexico does not need a hyperscale AI data center. Deny them.
