

## Phoebe Guskey

This is absolutely unacceptable. The water usage, the power usage the pollution all of it. And for what? So the whole facility can be outdated and useless in a few years? Our breathable air and drinkable water are not worth 200 temporary jobs so that some out of state billionaire can further line their pockets. If project Jupiter wants a data center so badly let them build it in their own backyards not in ours. We are in a climate crisis and are already struggling to find enough water to support the human beings that live here. We cannot waste water for cooling data centers nor should we use noxious gas to power them. This process has been incredibly rushed and shady. The public needs additional days to comment and more in person multilingual opportunities to comment. We cannot sacrifice the health and the lives of our children for a project of so little benefit to our community.
