

Perry Monroe

We don't need generative AI. We have lived fine without gen AI for years, we should honestly go back to when it wasn't released to the public. If you think back, things started to go down hill when it was introduced did it not? The environment is already on the verge of collapsing not just due to deforestation but also air pollution, which is caused by SO many things. Gas, factories, light, GENERATIVE AI. And on top of that most generative AI isn't used for good either. Grok for example, that's mostly used to make NSFW content or at least that's what it's KNOWN for. ChatGPT is useless because we have Google. (Even though they're also shoving AI down our throats) Not only all of that but Gen AI has made people dumber. The more people use ChatGPT on basic everyday day things means your brain stops thinking for itself and starts to rely on it. The more people that use AI to do homework, tests, etc... You're not doing any good to yourself. We need AI gone and that data center will only make it worse. MOST PEOPLE DONT WANT AI SO DONT FORCE IT.

New Mexico Environment Department should give the public an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
