

Noah Anonymous

Hello, my name is Noah, I am not from New Mexico however I do live on this earth, and not only will project Jupiter impact the residents near the data center, but me and everyone else on this globe. The effects of this center can possibly be downright catastrophic with how big and impactful it can be, we have seen the negative impact of normal data centers within other cities of the US, so the scale of what this project may do is unimaginable. Not only will it affect the lives of the people living nearby, but also the ecosystem, the environment and the animals Project Jupiters power plant will release more than 10 million tons of climate-warming greenhouse gasses, these gases are incredibly dangerous for causing global warming, acid rain, wildfires, air pollution, health risks and more, this plant will kill the life around it and present a risk to everyone within its radius. There are high schools and Daycares within 5 miles of the site, the sound the center will make will make it difficult for people to focus on school and work, cause auditory damage and disrupt sleep, the air pollution can cause or worsen chronic respiratory illnesses and cause damage to the health. From the water that these people use to drink, bathe and wash clothes and dishes, it will be contaminated with toxic waste such as sulfur and can cause gastrointestinal distress and skin irritation, IF water will be available at all. And these are only a small part of the possible impacts this data centers will cause, this is more dangerous than a nuclear power plant, this is a hazard to anyone and everyone and this should absolutely not be passed. NMED's mission is "to protect and restore the environment and to foster a healthy and prosperous New Mexico for present and future generations." Granting these permit applications is a direct contradiction to that mission.
