

Aggod Alina

How would it be possible for a data center this big to cause no trouble? There is already global warming and much more things that are actively destroying our earth and we do not need another one. AI data centers already take away a lot of clean, drinkable water. So if we make another, even bigger data center it can and possibly will put our future that already is not promised to be good in extreme risk, many people will not have access to clean water and many lives will be at risk, there are already many people who have struggles with accessing drinkable water and one of the main reasons for that is AI data centers. This project is a really horrible idea and it would cause so much damage to this planet, especially to the people that are living in that area/close to that area. What about cases of catastrophic failure? Are we approving those deadly incidents of pollution in advance without any real data informing us of the risks at this scale? Highly flammable hydrogen under high pressure only needs a microscopic crack to leak out, ignite, explode, and level entire neighborhoods and schools while sending shockwaves into nearby counties. Assuming this risk, an act of gross negligence, at a scale that has never even remotely been demonstrated in practice would be unbelievably careless. These permits must be denied outright. If further deliberation is desired, a public hearing in Santa Teresa is non-negotiable. We know the pollution approximations provided are based on an extremely lazy testing methodology and while we were not told whether these 4 tests were even done on-site or during peak temperatures, we can safely assume the applicants cut corners here as well in an attempt to fast track this approval. As I write this, Project Jupiter is draining an undisclosed amount of water from our shared aquifer on a daily basis.

Given the statistical invalidity of their pollution estimates, approving this air permit under any circumstance would be to allow this project to introduce unmitigated and undisclosed hazards into our air without consequence. Children attending Santa Teresa Elementary School will sit innocently, every day, LESS THAN ONE MILE from this pollution. Three other schools, an elder care center, and three public parks sit within around 4 miles of this project. Deny this air permit. Gambling with the fragile health of our children and elders would be a complete defilement of the authority vested in you.
