We don't need more data centers polluting our earth, ai and more technology is not a necessity, but our earth is. There are schools, care centers for the elderly, parks and people's houses that will get affected. It's horrible for the environment and horrible for the people who will be forced to endure it. Data centers get rid of so much of the environment and it distorts habitats. We learned this even in primary school, data centers are not a good idea and should not be treated as such. The residents are already racing horrible environmental changes, this is environmental racism but funded by the government. This is not okay.
