I am far from this country but hearing about this issue? made me have to write this comment, the doomsday clock already ticks lower and lower by the second— instead of the economy helping maintain atleast few more seconds that clock has, they decide to make a project that creates a climate disaster, Fuel cells that'll release 10 million tons of carbon dioxide annually and as they say NMED is supposed to protect and restore the environment, why is it permitting the Yucca Growth Infrastructure? i'm beyond furious about this; even when the name was first under 'acoma' by march, resident already protested and worried about their future. You cannot excuse this as a "mistake" or any sorts, when your office has failed to protect. If you choose to continue project jupiter, might as well also evacuate the citizens. Because if you are by any chance then that only means you're selfish and is only seeing the protest,yells and voices of YOUR fellow people for THEIR future, as nonsense. Sink that in; and to those who made this website, thank you. I hope you guys get justice served. :) And to the ones who are still considering this easy argument of whether to still build project jupiter? sincerely, i despise you and your incapability of hearing the plea of your people, your people deserves justice.
