Training the Workforce of the Future

I am writing to express my strong support for Project Jupiter as a proud member of Carpenters Local 1319, living here in Albuquerque.

Through bringing advanced construction techniques to our backyard, Project Jupiter will serve as a vital training ground. Our apprentices will gain hands-on experience with innovative technology that is revolutionizing our industry, ensuring Albuquerque's workforce is fully prepared for the advanced building demands of tomorrow. Project Jupiter represents an investment in the long-term skills development and competitiveness of New Mexico's working families. I urge NMED to approve the air quality permit and support this project so we can train, build, and secure a stronger future for New Mexico.

Sincerely,

Richard Maliszewski
