Dear NEMD staff,

I feel that I must preface this by saying that I do not live in New Mexico, but as someone who lives quite close to it, I can't help but be concerned about project Jupiter, and the risks it poses not only to New Mexicans, but any residents of earth.

And so implore you, New Mexico Environment Department, to reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid.

If Project Jupiter were to go through, then, as I'm sure you already know, it would need a significant amount of water to keep from overheating, and considering that the planet is in a state of water bankruptcy, and that any rivers or lakes have already dried in New Mexico, this would only exacerbate water shortages.

Next, climate change has been steadily, then rapidly worsening over the years, we, at the moment have already exceeded what use to be considered the "point of no return". If this data centre was to be built, then it would release 10 million tons of greenhouse gases per year, only heating our planet more.

Also, this type of data centre is untested, there's none of the same size that it can be compared to, and with no certainty of its affects, the consequences of its existence could be much worse than previously anticipated.

And, even if the rest of the world were to be unaffected, which isn't possible, this will negatively affect everyone in the area, children, adults, the elderly, the creation of this data centre would significantly impact their lives.

So I ask of you, for the sake of New Mexico, the generations that will succeed us, the animals that roam the land, and the very planet itself; New Mexico Environment Department, reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid.

And please to give anyone else just a bit more time, an additional 60 days more to review and comment to save their family, other New Mexicans, or fellow humans.
