

Anna Katherine

I oppose renewing WIPP's 10 year Hazardous Waste Facility Operating Permit.

It is too dangerous to change the type of waste to include pure plutonium.

Accidents can happen. I do not want any increased risk of exposure to plutonium for New Mexico.

WIPP was supposed to be a pilot project, with other facilities being developed elsewhere in the country. This has not happened, and there is little motivation to develop other facilities if WIPP's capacity were to double.

There are already too many nuclear weapons. We do not need to be producing more.

Please protect our environment and our health by refusing to allow WIPP to continue.
