

Stephanie Gudeman

It is most important when you consider off loading a bunch of radioactive by products that they are stored and maintained in a way that will keep them contained and out of the earth and ground water for 90 to 24,000 years depending on which plutonium we are talking here. Perhaps we should stop making the stuff or figure out how to recycle it safely. New Mexico is a beautiful state. Lots of trees making oxygen for everyone. We would prefer you send it somewhere else.
