

Susann McCarthy

I am contacting you in connection with the WIPP Renewal Draft Permit. New Mexico has already experienced one catastrophic nuclear waste packaging/shipping accident that caused WIPP to be sealed for a few years. If no proper-safety information is transmitted to employees responsible for these tasks, WIPP is just a crisis waiting for its next detonation! There is no reason for New Mexico to be victimized with the lethal nuclear waste of the nation. It seems to be a case of NIMBY by those in position to prevent the location of such a facility where their elite residences would be endangered. Well, New Mexico isn't the right place either! I ask that you not renew the WIPP Renewal. It seems obvious that such toxic material as nuclear waste is reason enough to discontinue its generation and waste storage problems. Thank you.
