

John Acker

As a long-time resident of New Mexico I have always participated in the public forums on our state and its dangerous relation to Nuclear production, containment and elimination. It is too critical for the future of our citizens not to do everything we can to eliminate nuclear development and production. When it comes to WIPP, the track record has always fallen short of the safest policies for our Environment and Citizens. The changes recommended this time are an improvement and I have only one caveat to address. The public comment hearings must be listed in all media and at least English and Spanish when being publicized. I appreciate the opportunity to address this issue.
