I remember when WIPP was first forced upon us and all the protests for naught. We were lied to and deceived but that just seems to be the way it is.

So to clean up the dishonesty that is woven into WIPP:

1. There needs to be a definite end date. This was a "pilot project". The current contract ends in April 2024. That will be fine. Not one day longer.
2. Repositories must be built in other states. We showed the right way and the wrong way so get out of NM and clean up the mess you left. Let other states take on this burden and danger from here on out.
3. New waste streams should not be allowed in WIPP. Plutonium was not supposed to go there yet it did from day one and still does.
4. Transport fo this dangerous waste should be minimal. Driving it to and from TX to NM and then to TN!!!!!!!!!!!!Really stupid. Have you kept up with the train wrecks of toxic chemicals lately. How utterly stupid!!!!!!!!!!!! Intelligent humans would not find this acceptable. Would you like to live near these toxins? How about your children, grand children? Who do you know wants to face this deadly threat in their town, neighborhood, near schools or parks. There is no thinking going on here.

Thanks for being smarter than the average fan of plutonium.
