

Frances Hardy

I agree with NMEDV in increasing accountability and guidelines for the WIPP project and its siting in New Mexico. The permit should extend for 10 years and not the permitting out until 2083 which makes NM a waste repository for nuclear waste that was never supposed to be stored here in the original agreement. If congress changes the law to increase permitted amounts of nuclear waste storage this license should immediately be revoked. No expansion or plutonium should be permitted. New Mexicans especially native Americans are already paying the price with cancers and health issues from nuclear development in our state.
