

Carlsbad, NM Dr. Martin Luther King Jr. Scholarship Committee

As a Carlsbad resident and the president of the Carlsbad, New Mexico Dr. Martin Luther King Jr. Scholarship Committee, I fully support the WIPP project! WIPP is designed to safely isolate defense-related TRU waste from people and the environment. Many people are not aware that the (TRU) Transuranic waste generated during the cold war is currently stored in facilities that could negatively impact our country. WIPP is designed to safely isolate defense-related TRU waste from people and the environment by permanently disposing it in its nuclear repository.

WIPP is a national treasure for our nation and a vital part of our future. It is imperative that we ensure WIPP continues its mission for the environmental safety today and for our next generation.
