

C. H.

WIPP should NOT be renewed. It should NEVER have been developed in the first place. New Mexico has tolerated this abomination with the intention of it bring short lived. It's deadline is coming up and should not be extended. We've already had several incidents at the site that posed danger to the workers and potentially to the outlying areas. Not to mention the trafficking of this deadly material in flimsy containers through our state and communities. Find another solution.

Nuclear waste is a minimum of 250,000 years until it is no longer dangerous. How does that fit in with the short deadline about to expire? Nuclear power is just a dressing for Nuclear arms. The waste created from all of this dangerous activity is nothing short of a death sentence for many associated with it.

NO NUCLEAR POWER, NO NUCLEAR WASTE, NO MORE WIPP!!

Why is it that we are so invested in such destructive means to support our energy needs when using any amount of all the \$\$ allocated could easily pursue non lethal solutions, non- military solutions. WE NEED ALTERNET SOLUTIONS FOR THIS WASTE, FOR STORING IT (as it is necessary), AND RETHINKING WHY WE NEED IT IN THE FIRST PLACE. THIS IS NO SOLUTION.
