

Maresa Pryor-Luzier

Dear WIPP:

These points are very important to oversee the nuclear waste in New Mexico.

The US Department of Energy (DOE) will now be required to provide an annual report about the progress it has made toward establishing a permanent repository for radioactive waste in a state other than New Mexico

The NMED will exercise its power to close the site if Congress changes the limit on the amount of waste that can be disposed of at WIPP

The DOE and its contractors will implement a new plan with a complete inventory of legacy waste around the US for disposal at WIPP

The permit will include additional public notice and participation opportunities

The permit will also prioritize the removal of waste from Los Alamos National Laboratory to WIPP to help ensure that contamination at the Laboratory doesn't reach the regional aquifer or downstream waters such as the Rio Grande .

Please enforce these points.
