

## Betty Kuhn

I have lived in Santa Fe for 45 years. I witnessed the terrifying Las Conchas fire approaching LANL property. I have friends who almost lost their house in the Cerro Grande fire that burned structures at LANL. Weather is getting more intense as well as the current push for making plutonium pits at LANL which will increase radioactive waste at WIPP. The legacy waste which is so vulnerable to wildfires must be prioritized for clean up as DOE is obligated to do. I support the NMED's modification to the draft Permit and request a public hearing.
