

Kathryn Sonenshine

It is literally a miracle that no radiation has been spread across New Mexico land by a wildfire reaching the legacy waste at LANL. This destruction of life, property and ecology IS IMMINENT, unless there is completion of the REMOVAL AND all necessary cleanup there! I am extremely grateful that NMED is making this important requirements of making a stronger permit and forcing DOE to abide by it. It is ONLY a matter of time - a wildfire will reach the waste location. I support NMED. DOE needs to take responsibility immediately! And determine the contents of the barrels and GET THEM MOVED! Their own lives and lives in the whole region depend on it!
