RE:

NMED AIM Draft Permit - I support the modification of NMED's permit because eight wildfires have burned in the area surrounding LANL, and all the waste polluting our environment! The mesas holding the legacy waste are flanked by canyons filled with brush. The waste must be moved underground. The government must keep nuclear waste safe and out of the environment for the millennia - it is DEADLY. Because we don't see it, because the industry and government agencies don't want us thinking about it, we live alongside it at our peril! The US alone has over 90,000 tons of waste today, NO idea what to do with it! And it is encouraging people to choose to make more! We don't need more Bombs! Please stop the insanity! Stop poisoning the earth and all contained in it! If anything happens to it, we will all be goners! I don't understand why people don't understand this!? Help!
