

Michele Rozbitsky

We need to transport all the radiative waste from Lanl to Wipp as soon as is safely possible and not poison the ground water affecting the Rio Grande Basin watershed and all people. I am presently listening to the Draft Pit Production Hearing. Mass production is to be limited. All done in Georgia because Los Alomas is very close to very populated areas such as Santa Fe and Albuquerque. We need to actually stop all production still having no way to dispose of waste. One bomb exploded will not stop war but start an unwinnable war. Stop now. I have lived in NM for 43 years. Do not destroy this beautiful place. Michele
