

RICHARD RYAN

We are just EXTREMELY LUCKY that no radiation has yet been spread across New Mexico land by a wildfire reaching the legacy waste at LANL. NMED is trying to keep it that way by making a stronger permit and forcing DOE to abide by it, AND PRIORITIZE MOVING THE WASTE, which is what is needed to prevent nuclear disaster in our region around LANL. Given time, a wildfire will reach the waste. We support NMED, and demand for the safety of our region, that DOE comply!
