

Geoff Campbell

I fully support NMED's permit modification directing DOE to prioritize shipment of LANL legacy waste to WIPP. Thousands of New Mexicans have been asking for this because the current situation is unacceptable. Hazardous Cold War waste should not continue sitting above ground in a wildfire-prone area while DOE delays action year after year. NMED's modification is common sense and ensures that the DOE does what it is already legally responsible for doing. New Mexico's safety must come before any other DOE mission or future weapons production plans!
