

Roberto Roibal

I strongly support the proposed permit modifications. These measures prioritize cleanup, enforce accountability, and protect communities and the environment. When WIPP was first proposed, New Mexico was promised that legacy waste from Los Alamos National Laboratory would be prioritized for storage at WIPP. It is imperative that the radioactive waste at LANL be removed from the site and be shipped to WIPP. This must be prioritized to ensure the safety of New Mexicans. The NMED AIM Draft Permit must be approved.
