I strongly support the NMED draft permit prioritizing the move of nuclear waste from the temporary, un-secure site at LANL to the permanent WIPP site. The current aboveground storage of LANL nuclear waste at LANL at a temporary above-ground site, some of it dating back to the 1950's, in an area that is prone to wildfires, puts New Mexico and any state downstream from a fire, at risk from plumes of wildfire smoke containing nuclear waste particles that can permanently contaminate the soil downstream for thousands of years.
